

*

* You are planning a home security system with a central monitoring unit and multiple sensor nodes. For which part would you use a microcontroller and for which part would you use a microprocessor. Explain.

Home Security System

Sensor nodes

Monitor sensor → Microcontroller

Door sensor → Microcontroller

Gas sensor → Microcontroller

Central monitoring unit

Data Aggregation → Microprocessor

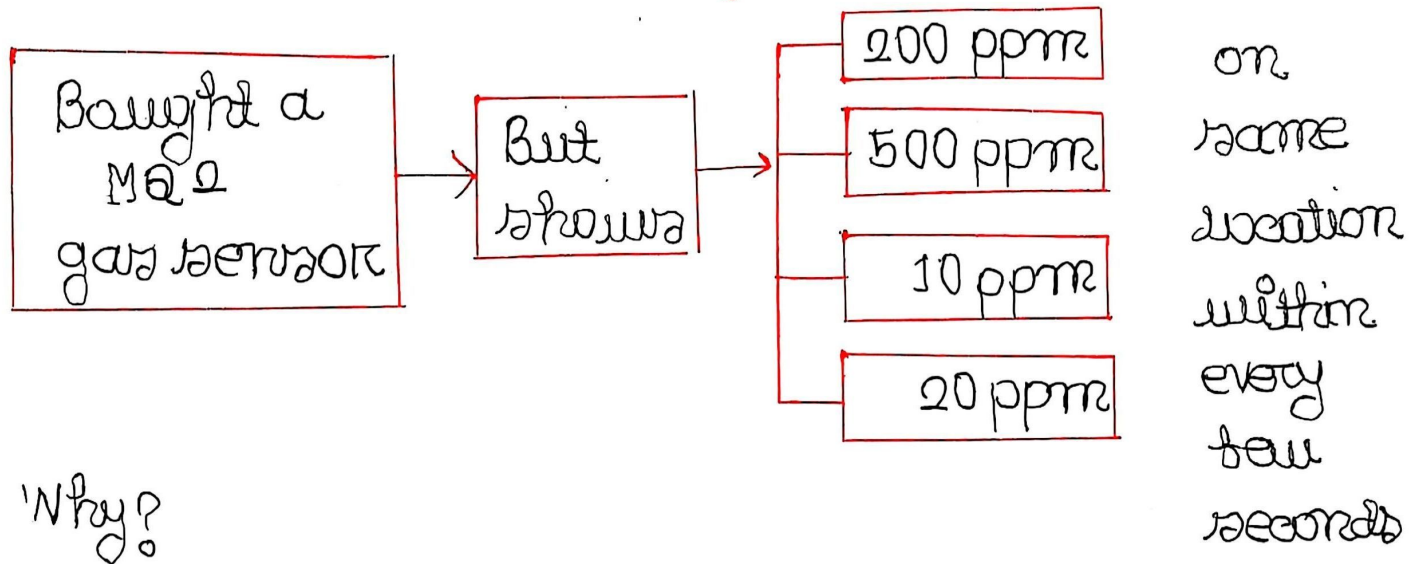

Login/Logout → Microprocessor

Notification alert → Microprocessor

Dashboard management → Microprocessor

Server interactions → Microprocessor

* Pre Heat time for MQ2 gas sensor.

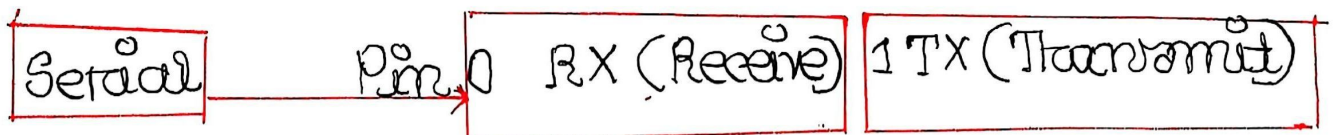

Why?

- ⇒ We didn't calibrated the gas sensor
- ⇒ We will leave the gas sensor connecting with power supply for 1 hr.

* Serial.begin(9600);

It initializes the serial communication between Arduino and computer/other devices.

9600 is baud rate ⇒ speed of communication in bit per sec.

□ Why do we use GPIO pins in raspberry pi?

Ans:
